MORTAR

### DIRECTIONS FOR USE

- 1 Shake bottle before use. Dilute 1 litre of Brickies' Own with 19 litres of clean water in a clean container (at least 20L capacity) and mix well.
  - 2 Mix 12-25ml of the diluted Brickies' Own mix to 20kg cement in a typical M3 mortar.
- ✓ Diluted Brickies' Own Plasticiser can be used for up to 12 months, provided the solution remains clear and is stored in a cool location away from direct sunlight.
  - ✓ Clear amber-coloured liquid is easier to measure, mix and dilute than powder-based plasticisers
  - ✓ Air-entraining properties increase **smoothness, strength, adhesion** and **workability** of mortar, render and other sand/cement mixes
  - ✓ Improves flexibility and durability, and reduces the cracking and weakening effects of thermal expansion/contraction and frost
  - ✓ Can be used in both sand/cement and sand/lime/cement mixes
    - Manufactured to conform with AS 1478.
    - When working with cement products, always avoid contact with skin and wear gloves, mask and safety goggles.
    - Store in HDPE plastic, air-tight container and check regularly for spills. Do not store in metal container.
    - Non-flammable, but combustion may release toxic fumes.
    - Do not mix Cement Australia Brickies' Own with other chemicals or additives.
    - Check your local government by-laws for appropriate disposal of pack and discarded product. Do not wash into drains or waterways.
