

## PRODUCT DATA SHEET

# Jointfill Sand

Cement Australia Jointfill Sand is a special blend of graded fine sands designed to help lock into place all types of brick and block paving.

### Directions for Use

1. Lay pavers as per manufacturer's instructions
2. Jointfill Sand should be thoroughly swept into all joints using a stiff broom. Pavers should be dry to allow the free flow of the sand into the joints
3. When all joints are filled a vibrating compactor or similar equipment should be worked over the entire area of the paving to assist the flow of sand into the joints and ensure that the joints are firm
4. Thoroughly sweep the paved surface, topping up where necessary and remove all excess surface sand

### Limitations

Jointfill Sand is not recommended for use in paving where gaps are greater than 3mm wide. Cement Australia's Sand and Cement, swept in dry or mixed wet, is recommended for paving with gaps wider than 3mm.

### Storage, Handling & Safety

- Care should be taken when lifting bagged products as personal injury may occur. It is suggested that when lifting bagged materials, the load is shared with another person
- Jointfill Sand should be stored in a dry place, off the ground and be protected from the ingress of moisture

### Further Hints & Tips

- One 20kg bag of Jointfill Sand covers approximately 3.5 m<sup>2</sup> at a 3mm gap (brick shaped pavers)
- One 20kg bag of Jointfill Sand covers approximately 12m<sup>2</sup> at a 3mm gap (400mm square pavers)

**NOTE:** The Jointfill Sand Safety Data Sheet (SDS) is available at [www.cementaustralia.com.au](http://www.cementaustralia.com.au)
