Cement Australia Post Set Concrete is a proportioned blend of cement, aggregate and sand for use in projects where a non-structural concrete is required.

Post Set Concrete is part of our 'Just Add Water' range and is specifically designed for fixing fence posts, clotheslines, letterboxes and other non-load bearing posts into the ground.

HOW TO USE

STEP 1 Place the post in the hole and provide support so that it does not fall over.

Note: The hole should be pre-wet to limit the absorption of water from the Post Set Concrete mix.

STEP 2 Place Post Set Concrete in a wheelbarrow, create a hallow and add clean water according to the bag instructions and mix thoroughly to achieve a workable mix.

Too much water ruins good concrete.

STEP 3 Place mixed Post Set Concrete in the hole, compact it using a steel rod or similar to tamp the concrete to remove any air, and leave to set.

Supports should be left for 24hours.

SPECIFICATIONS

Approximately 2 x 20kg bags per post hole.

HOW MUCH DO I NEED?

Visit cementaustralia.com.au/calculators to use our handy product calculator to work out how much Gap Sand you need for your project.

LIMITATIONS

Post Set Concrete is not recommended for used in any structural applications.
